**Butterflies of the Vercors**  
**30th June - 7th July 2023**  
**Led by Richard Lewington, Jason Mitchell and Alice Hunter**

## Day 1

We met at Lyon airport following a heavy downpour and with some of the group getting caught in it as they came from the TGV station. Thankfully, there was time enough to change clothes and get a coffee as we gathered waiting for the last pair to arrive on a delayed flight, and it wasn't too long before we loaded up the buses and were able to get on the road.

Our journey to the hotel was broken after about three quarters of an hour with a stop at a peat bog site with potential for Large Copper and other wetland species that we wouldn't find elsewhere on the trip. It had rained all the way here, though not as heavily as before and was reduced to a drizzle as we climbed out of the vehicles. A single fluttering butterfly transpired to be a Green-veined White which was encountered before we entered the reserve.

We enjoyed a stretch of the legs despite the damp weather and were able to take in some lovely specialist plants like Marsh Helleborine, both Yellow and Purple Loosestrifes and less showy but no less particular to habitat Marsh Fern. Blackcap and Chiffchaff were singing and Jason picked out the call of a slightly more distant Cirl Bunting. We admired the impressive colony of pitcher plants that has been established here before moving on.

Our next stop only a few minutes away proved an excellent spot to purchase lunch in a local bakery and before long, suitably fed, we returned to the road for the remainder of our journey. Our route took us past great expanses of Walnut trees, a staple crop in the region around Grenoble, and through the narrow roads of Pont En Royans before steadily climbing to reach La-Chapelle-en-Vercors and our hotel for the first few days.

## Day 2

Setting out this morning, we were glad to see that the rain had abated since our arrival and while a lot of the foliage was still wet, the weather looked to be warming. We headed out of town via the Gorges de la Bourne, where we made a brief stop to admire the impressive landscape and, almost inevitably, found other things to look at. The first was a Pearly Heath, joined by a Large Skipper and an orangey southern form of Speckled Wood, all in the canopy of the trees with which we were level. A Large Wall and a member of the *Erebia* genus were also spotted high above us on the rock face, the latter eluding certain identification.

We drove on through the gorge, emerging to turn down another, rather wider gorge where we would park up and walk along a section of boardwalk which doubles as a footpath and mountain bike route. Sadly the immediate edges had been cut and so there were fewer opportunities for close viewings of the invertebrates we sought, but a few were found in due course including Large Wall butterfly, Almond-Eyed Ringlet, both Beautiful and Banded Demoiselles, and White-legged Damselfly.

Alice and Jason went back to bring the vehicles round to meet the group a little later and were able to enjoy sightings of a Lesser Marbled Fritillary, Common Buzzard and Red-backed Shrike before we headed onwards to our lunch stop.

Arriving at the stop for lunch, we found our picnic bench occupied but soon discovered that they were packing away their picnic and so we were able to take their spot. There weren't many butterflies here but there were some lovely flowers including Bird's Nest Orchid, some tight buds of Broad-leaved Helleborine and pristine Martagon Lily. Both Large and Small Yellow Foxgloves were admired along with Spiked Rampion and having heard Crested Tits in the trees around us,

Firecrest © Alice Hunter

Jason briefly played their call to see if we could see some. They weren't forthcoming but instead we had the most fabulous views of a Firecrest.

Having eaten, we visited a small patch of meadow which we had passed on our way to our picnic and which last year had proved to be full of insects. The bank had been cut this year but we were still able to find a few nice species including Essex Skipper, Small Heath and Common Blue plus Wart Biter and Green Mountain Grasshopper.

Our next brief stop was at the Valchevrière Overlook where there is a memorial to the French

Resistance and the village of Valchevrière which was destroyed by the Germans during the war. The view from here is over the top of the gorge through which we had driven in the morning and is impressive even without the poignance of the location.

We made another stop at a small meadow with a pond full of tadpoles where a few day flying moths were deceptively butterfly-like and a Large Skipper proved the only true butterfly to be found. A short walk up the road yielded a variety of plants including Dusky Cranesbill, Aconite-leaved Buttercup, Lesser Butterfly Orchid and Common Wintergreen, and next to a building that was being renovated we found a Pearl-bordered Fritillary.

Moving on, we made one last impromptu stop while the sun shone on a meadow which was full of both floral and invertebrate interest. It was full of Viper's Bugloss and studded with Heartsease, Black-veined moths fluttered among the grasses and a few butterflies were found including Almond-eyed Ringlet, Southern Grizzled Skipper and a rather worn Dingy Skipper.

We returned to the hotel to find the cloud that had kept the day cool beginning to break as we sat down for supper.

Lesser Butterfly Orchid © Gillian E

### Day 3

The day dawned cloudier than we had hoped and so after breakfast, it was decided to walk a short way down the road to see some beautiful stands of Pyramidal Orchid that we had spotted from the vehicles the day before. The short outing soon turned into a wander that, while not a long distance, ended up lasting most of the morning.

Not only were there Pyramidal Orchids but also some fine examples of Lizard Orchid and one or two gone over Man and Chalk Fragrant Orchids. A few Marbled Whites were fluttering about and as we turned off the road onto a footpath that led up the hill we suddenly had more photographic opportunities with a number of settled insects. As well as the Marbled Whites we found a Pearly Heath and Heath Fritillary.

Blue-spot Hairstreak © Steve L

Further on, a very fresh Blue-spot Hairstreak posed for more photos on Richard's finger and we admired Peach-leaved Bellflower and Greater Twayblades. Jason managed to pick out a Garden Warbler and in a sunny patch by an old quarry we found a number more Heath Fritillaries, Small Heaths, Meadow Browns and Marbled Whites. A Gird Bunting was also happy to sit and sing in the top of a tree, giving us good views.

We finally returned to the hotel for a quick break before heading out to our first proper site of the day as the sun was becoming a slightly more constant feature in the sky. A Tree Pipit sang as we arrived

and was soon joined by Skylarks. We followed a path that had been mown to reach a picnic bench and were soon rewarded with Burnt-tip Orchids. As we admired the Spiked Speedwell and Common Rockrose, Gillian spotted a large blue butterfly, we followed it and were able to ascertain that it was a Mountain Alcon Blue, of which several more were found before we stopped for lunch.

Having eaten, we explored a little further down where Richard came across a Large Grizzled Skipper, and then over the road where Alice found a Bath White. A beautiful fresh Brown Argus was observed and a mating pair of blues turned out to be Adonis although by the ragged state of the male it was tricky to tell. Richard spotted a Mazarine Blue and later a Mountain Brown Argus before returning to the vehicles.

Mountain Alcon Blue © Gillian E

Our last scheduled stop of the way was near the ski centre at Font d'Urle. Thankfully the cloud had lifted and we had sunshine here although there were a couple of heavy clouds which blew through at quite a pace later on. We wandered through a beautifully flowery section with masses of Common Rockrose, Alpine Alchemilla, Round-headed Rampion and Bistort, finding a number of Almond-Eyed Ringlets and Small Heaths on the way. A rocky outcrop provided an excellent spot to botanise without bending over with Saxifrages and a number of other plants to admire.

A shadow passing overhead alerted us to a low pass from a Griffon Vulture and we could hear the rather raucous calls of Red-billed Chough nearby but also managed to single out some Alpine Choughs in the flock. We had good views of Northern Wheatear too and Martin found a fairly large ammonite in the limestone pavement beneath our feet.

Griffon Vultures © Alice Hunter

Crossing the road to look at some of the floral wonders there, we found Fringed Pink and Jason pointed out a lovely Globe Orchid. The Griffon Vulture then made a return and brought a few friends, we watched in awe as one became two, then five and eventually around 50 birds rising on a thermal above us and creating quite the spectacle.

Wandering back to the van, a Brown Hare was spotted in the middle of the road which was a bit of a surprise and Jason managed to pick out a family of continental Coal Tits in the trees nearby before we climbed in for the return journey.

We took a circuitous route, pausing for photos of the impressive landscape from a high vantage point beside the road. Dinner this evening was enjoyed beneath the boughs of a large Horse Chestnut tree just outside our hotel.

## Day 4

Although today would be our transfer day, we took a leisurely start to the day by opening a moth trap set in the hotel gardens prior to a late breakfast. Small Elephant and Pine Hawkmoths were among the larger specimens but we also had beautiful examples of The Latin and White Spot among several dozen others.

Having packed up the buses we eventually set out in a southerly direction and were soon making a small detour to our first stop, a ski area above Col de Rousset. The sun was

The Latin © Ken E

Swallowtail © Simon P

shining and the view from the top was spectacular though a breeze kept the temperature lower than ideal. Despite this we found a number of new butterflies for our list, including Clouded Apollo, Red Admiral and Meadow Fritillary. A Swallowtail was the largest of our finds and in excellent condition, while a Red-underwing Skipper found along the roadside as the group wandered down was diminutive in scale but no less magnificent.

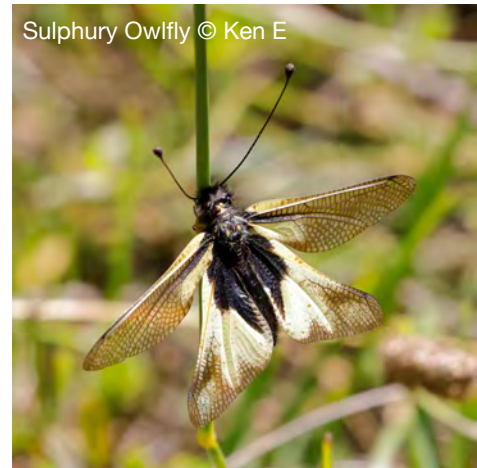

Having made a brief comfort stop at the bottom of the road, we drove on through the tunnel to the Col de Rousset viewpoint and were rewarded with another wonderful vista and a few rather good additions to our list once again. The first was a

Marbled Skipper drinking from a pothole, the second, the iconic Apollo behaving in rather characteristic fashion for the hot weather and sailing past at high speed overhead, barely stopping. We enjoyed them nevertheless and added a few plants to our observations including Mountain Germander and *Tanacetum corymbosum*.

We moved on to find a spot for lunch just outside the town of Die and ate in the shade of some Downy Oaks. Great Banded Graylings were batting around with relative frequency but were new for us this week and after lunch we wandered through to a damp spot where Lulworth Skipper was noted.

Our next stop was a flowery patch next to a water pumping station where Black-veined Whites were joined by Berger's Clouded Yellow in flying through and barely stopping. Silver-studded Blues were found too, along with Safflower Skipper and Grayling. As well as the butterflies, we enjoyed views of two types of Owlfly, *Libelloides coccajus* and *Libelloides longicornis*.

Our final stop was on a corner below Col de Menée where Alice was hoping to find a large patch of Greater Knapweed which had previously proven fruitful. Sadly it seemed to have all been grazed off just below knee height and there was not a bloom to be seen but despite this we took a wander down a track nearby and found Silver-washed Fritillary and *Zygaena romeo*. On the way back to the vehicles, Gillian spotted a Red Helleborine and nearby Jason found Lopsided Wintergreen flowering.

Sulphury Owlfly © Ken E

We checked in to our next hotel and some took advantage of the pool before dinner while others played Pétanque afterwards.

## Day 5

Although the day dawned clear, Mont Aiguille was hidden in a cloud when we set off after breakfast for a walk from the hotel. We were initially occupied by bird sightings including Redstart and Serin. A few flowers were enjoyed on a grassy section alongside a dry stream bed including Wood Cow-wheat and Small Yellow Foxglove. We then took a track between some agricultural fields and although we didn't see many butterflies initially, our luck changed as we turned uphill. We bordered a field of Lucerne with arable weeds mixed in and our first finds were Small Tortoiseshell, Common Blue and Large White.

We wandered up to an archery range which has been left as more of a flowery meadow and soon found a few new additions to our list including Comma and Spotted Fritillary. There was some debate about a couple of other Fritillaries near the entrance too, with Meadow and Heath both seen. Walking along the field margin we noted Field Toadflax and a lovely Dark Red Helleborine flowering. Some of the group went on down the edge of the field seeing Scarce Copper and a few other butterflies while others ventured into the woods and found Broad-leaved Helleborine and Common Spotted Orchid flowering, plus a Woodland Brown.

Reconnecting at the track along the bottom of the field, we turned back the way we had come to return to the village. On the way, Richard found a Marbled Fritillary in rather an inaccessible spot up a tree. We paused below the church to browse the local market stalls and have a coffee in the cafe before returning to the hotel.

Scarce Copper © Gillian E

Here we got in the vehicles to head up the mountain for lunch at the Col above us. There were several more Scarce Coppers here and having eaten we were able to explore the area a bit. Above our picnic spot we came across a smart Yellow-winged Darter and some examples of Fragrant Orchid in pristine condition. Below, we found Black-veined White and Marbled White plus more Scarce Coppers settled on the blue flowers of Cupid's Dart.

We followed the track over the road for a while, pausing at a damp patch to admire more lovely Fragrant Orchids and several Marsh Helleborine though the latter in bud. A Niobe Fritillary settled on the path ahead allowing decent but fairly brief views. Meanwhile, a Red-backed Shrike flew nearby and although we did our best to walk carefully along in the hope of a better view it initially eluded us flying ahead. In the end though we had a good view as it

flew to the top of a nearby tree for all to see.

In a cleared area in the woods beyond, grasses and flowers had begun to recolonise and here we found more butterflies to add to our tally including Chalk-hill Blue and Cleopatra. There were more Mountain Alcon Blues here too and an Amanda's Blue, plus flowers including Cut-leaved Selfheal and Dragon's Teeth.

Walking back up the track, half the group opted to walk back to the hotel and Alice volunteered to go with them leaving Jason and Richard leading the other half. The latter headed back to the hotel for a more relaxed end to the day with swimming, a wander in the village and Pétanque on the cards should they choose. The walking group meanwhile spent just over an hour and a half on their route and added a few species to the list in terms of plants such as Masterwort, Sanicle and Red Trefoil. They heard Bonelli's Warbler calling and managed to catch sight of it in a tree next to the path and also had more sightings of Mountain Alcon Blue, Chalkhill Blue and Clouded Yellow along with other butterflies. It was a thoroughly enjoyable extension to the afternoon despite the heat.

The burgeoning Pétanque championships continued long after dinner and a moth trap was set overnight.

## Day 6

We ventured out before breakfast to empty the moth trap and were delighted by what we found. Martin spotted a Goat Moth superbly camouflaged as a twig on a nearby bush and a Willow Beauty was found in a characteristic spread flat pose on a planter. In the trap itself there were a number of lovely species including Beautiful Hooktip, Poplar Hawkmoth and Privet Hawkmoth among others.

Beautiful Hooktip © Ken E

Having enjoyed breakfast we set out for the day, heading back over the Col du Menée and up to the Vallon de Combeau. We made a short stop on the way up the valley in case there was any sign of Military Orchids flowering and while there weren't we did find some nice species of butterfly including Safflower and Olive Skippers.

At the parking area we gathered our lunches along with everything else we needed for the remainder of the day and headed uphill. The lower area had been quite heavily grazed but we

were soon above it and appreciating a variety of flora including among others Alpine Alchemilla, Alpine Plantain, Betony, Spiked Speedwell, Common Rockrose and Burnt-tip Orchids.

Further up, the path opened out to a plateau rising more gently and with large grassy areas full of flowers to explore. We noted Crossbills flying overhead, Serin and Woodlark calling and a number of more common birds too. There were few butterflies on the wing as it was cloudy to begin with but Mazarine and Chalkhill Blues were spotted fairly early on and there would be others to follow.

We found a spot further up for our picnic lunch and just as we sat down Alice and Jason caught sight of a Common Brassy Ringlet which they followed for a while, though sadly it flew out of sight and many of the group didn't manage to see it. Having had our fill, we continued uphill a bit further finding Alpine Aster on the way and getting good views of a Redstart on a fencepost by the farm buildings further up. This was our turning around point but there was much more to see on the way back down as the sun was now fully out.

Our first find was a lovely male Foulquier's Skipper, complete with fluffy white tufts on the tail end of his abdomen. Next up we had a Turquoise Blue nicely

perched on a stone, though some of the group had gone on beyond shouting range and missed this attractive butterfly. There were more of both species further down plus a mass of Mazarine Blues puddling on a fresh cowpat. A Broad-bordered Bee Hawkmoth was nectaring on Meadow Clary and near the bottom, we tracked down Escher's Blue. Back by the vehicles we found another puddling group of mostly Mazarine Blues and Mountain Argus on what transpired to be a discarded hard-boiled egg.

We made a final stop at a quarry on the way back down where we came across some very fresh Purple-shot Coppers along with quite a number of False Heath Fritillaries, mating Black-veined Whites, a fleeting Blue-spot Hairstreak and an obliging Swallowtail. Overhead we also had views of both Peregrine Falcon and Golden Eagle.

The Pétanque championships continued after dinner with much merriment and a modicum of seriousness.

## Day 7

We began the day in sunshine again and made a quick stop to fill up with fuel on the way to our first stop at a spot near St Michel les Portes. This was to be our main location for the day and so we took our lunches with us and set off uphill once more. The first couple of meadows had been mown and were sadly less fruitful than our previous visit as a result but we soon came to some flowery spots that held more interest. One of the first finds was a Heath which we debated the identity of between Pearly and Darwin's, eventually settling on the former which we'd already seen, followed by Bright-eyed Ringlet which was new for the trip.

There were quite a number of orchids flowering too, with Bird's Nest Orchids and Broad-leaved Helleborine beneath the trees, Dark Red Helleborine, Common Spotted and Fragrant Orchids along the edges of the track and at least one probable hybrid between the latter two with spotting like the *Dactylorhiza* but a flower shape more like the *Gymnadenia* and a faint fragrance. Further up still we found both Lesser and Greater Butterfly Orchids and two species of Wintergreen were noted.

Having enjoyed lunch with a majority of the group all sharing a large log to sit on, we caught up with a Wood White that fluttered past

and then settled for photos before heading back the way we had come. In a larger clearing Steve found a False Heath Fritillary and we took in the darker, orangier southern form of Speckled Wood.

Taking a slight detour through a meadow on the way back, Alice managed to pick out a chamois high on the slopes of the mountain face opposite through binoculars and was able to point it out to the group despite it looking initially like a small brown blob!

We eventually made it back to our vehicles and stopped in Gresse-en-Vercors for a well deserved ice cream break. Our final stop was at a view point above the town to take in the spectacular vista of the mountain chain and enjoy some final butterflies and flowers while there. We had good views of an obliging Red Admiral, Jason pointed out some nice Martagon Lilies and we found some lovely Round-headed Leeks in full bloom near the top. Brigid also spotted a Small Elephant Hawkmoth. On the way downhill, Gillian picked out an Apollo in flight while Ken found a Broad-bordered Bee Hawkmoth nectaring on the Viper's Bugloss along with the closely related Hummingbird Hawkmoth.

We paused near the hotel on the way back as a Short-toed Eagle soared low over the road allowing us all a good look and a chance for more photos. Simon caught sight of a Roe Deer a short way further on too.

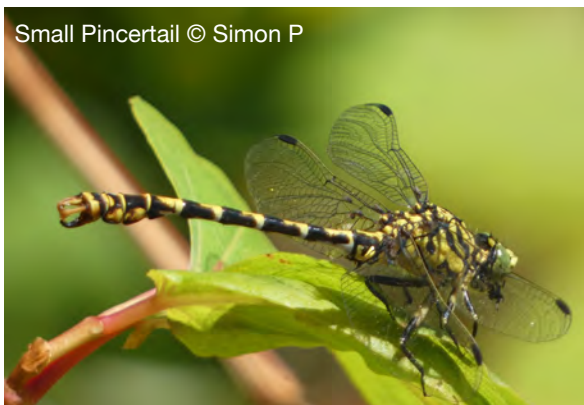

The grand final of the Pétanque Championships was held before dinner with the evening meeting delayed to allow for extra time playing. Our hostess kindly gave us an aperitif before dinner and the inaugural (paper) cup was awarded to the winners.

## Day 8

Our final day dawned and after a leisurely breakfast with extra time for packing our cases, we loaded up the vans and took a final walk around the village. There was a little cloud around but it was burning off over the course of our wander. There weren't many butterflies about to begin with but there were a few birds making an appearance including Black Redstart, White Wagtail, Serin and Greenfinch. Swifts, Swallows and House Martins wheeled overhead, swooping up to their nests under the eaves of the houses we passed.

Turning away from the houses, we took a route along a field edge where a pristine Small White nestled among the wildflowers along the verge and we had a lovely view of Mont Aiguille with Poppies and other flowers amongst the crop in front of us. Small and Large Yellow Foxgloves were flowering beneath the trees above the field, along with Field Toadflax. As we turned down the final stretch back to the hotel, Almond-eyed Ringlets and Meadow Browns flitted about in a meadow and Ken spotted a Short-toed Eagle soaring overhead.

We were soon on our way back towards Lyon, making a stop at the same bakery we'd visited on the first day to boost our packed lunches with sweet treats. We took them on to the peat bog reserve and enjoyed our lunch on the grass outside before heading in to explore. We had barely sat down when Richard spotted a summer generation Map butterfly sail past and settle briefly. Food was briefly forgotten as photos were sought but sadly it flew before anyone could grab a shot.

Lunches devoured, we spotted a dragonfly in the carpark that caused a stir, a Small Pincertail. This one was obliging for photos and once we'd obtained them, we headed in along the reverse of the route

we'd taken last time. A Copper Demoiselle was admired in the woodland section of the boardwalk and a lovely southern orange form of Speckled Wood fluttered by. Further on, Jason pointed out a hawking Yellow-spotted Emerald Dragonfly and round the corner there were more including a mating pair, though they were all reluctant to settle. We could've stayed so much longer now that the sun was out and the invertebrates were enjoying it but sadly we had to make a move to get back to the airport on time.

We made the last leg of the journey in good time and said our goodbyes at the airport before heading off our separate ways.
